

Taranto Systems Blue Badge Solution

Taranto has designed and developed an end-to-end Blue Badge application and management module within Taranto. The fully integrated system drives efficiencies across both the application process and back-office management of Blue Badges misuse.

Our Blue Badge module has been designed in close collaboration with our local authority experts with all the information captured based on the DfT application process. The module is user-friendly, and like the DfT page, it allows you to upload supporting evidence and view the status of the application. It is linked to the Department of Transport (DfT) and has an automatic inbuilt 'fraud checker' to help local authorities reduce Blue Badge and this can also be linked to your own website.

The government estimates Blue Badge fraud is costing the UK an estimated £46m a year – Taranto's innovative fraud check will help reduce misuse.

Blue Badge application and management module

Our intelligent Blue Badge back-office module integrates seamlessly with the Taranto Blue Badge customer application as well as the DfT. Back-office users can email the applicant directly to request further information and the inbuilt fraud check flags misuse. A user can review and process new applications and manage all aspects of their existing Blue Badges in this application and management module.

Blue Badge Check on Taranto Mobile

The government estimates Blue Badge fraud is costing the UK £46m a year. The innovative fraud checks on the Taranto Mobile app allows civil enforcement officers (CEOs) to check the right person is using the Blue Badge. The new feature integrates with Taranto back office and the DfT website to ensure that validity of the Blue Badge.
